

onmaps - WebMapService

Nov 2020

Topographical maps for Germany based on official governmental data.
The leading WebMapService for site assessment and planning in Germany.

Technical notes

The data and functions

- WebMapService, TileMapService
- based on "ATKIS"-data - nationwide official data for Germany
- buildings with high accuracy - from official ALKIS-Data, nationwide for Germany
- landed property information (parcel, parcel number etc.) from the OpenData in Germany
- OSM-data in the onmaps-layout, europe-wide, monthly update
- contours and hillshades based on SRTM-data (30m grid)
- WMS-Basic-layers in several map-schemes
- WMS-layers with different abstracts of ATKIS-objects
- dynamic, context-sensitive legend-graphic
- special WMS-layers defined for creation of images with high resolution
- GetFeatureInfo (Information about the ATKIS-objects)
- annual updates of the ATKIS-data and buildings

The structure

The WMS contains various layers, which are grouped by

- keywords
- name
- coordinate system (crs/srs-code)

The URL / parameters

Structure of the URL:

<https://wms.onmaps.de?kid=<customer-ID>>

Parameters (e.g.):

http://wms.onmaps.de?kid=<customer-ID>&GROUP_LAYER_BY=keyword

http://wms.onmaps.de?kid=<customer-ID>& GROUP_LAYER_BY=crs,name

(only the specified GROUP is listed)

<http://wms.onmaps.de?kid=<customer-ID>&filter=crs:25832> (or 31467, 31468 etc.)

(the WMS is delivered in the specified EPSG-code, onmaps supplies all common coordinate systems)

http://wms.onmaps.de?kid=<customer-ID>&WITH_BASELAYER=true

http://wms.onmaps.de?kid=<customer-ID>&WITH_BASELAYER=false

(the WMS is delivered with or without superior layer)
